WHERE ARE WE?

Chorzów (Southern Poland)

Population 107 807 (2019)

Area of city 33.24 km²

Population density – 4th place in Poland (over than 3.000 people per km²)

Chorzów is located in the center of the Silesia conurbation

WHAT WE DID BEFORE ITS?

- Almost all traffic lights were rebuilt for accommodative signals;
- The collision and heavy junctions on roundabouts were rebuilt (28 junctions);
- Intersections were channeled (if possible);
- Street geometry has been improved.

The moment has come when the engineering tools available to us have run out.

- Each of the 13 cities with district rights has its own street administration;
- Plans to establish a metropolitan organization (which was only established in 2018);
- Taking an engineering initiative to implement a transport system in Chorzów;
- The most important condition - the system is to be open and ready to cooperate with neighbouring cities;

OUR MAIN ASSUMPTIONS

Implementation of a transport system that can function both on a coordinated route, on a network of intersections, managing them in area and locally, increasing the dynamics of isolated intersections

Increasing the level of informing drivers passing through the city - encouraging drivers to choose less busy roads

Introducing a priority system, that will realistically accelerate the travel time of public transport vehicles through our city

SCATS SYSTEM

The heart of our ITS System.

SCATS is an adaptive system to control traffic lights in given area.

The system works in real time, optimizing and adjusting signaling control parameters in the area to current road traffic.

SCATS allows analysts to make any changes.

SCATS SYSTEM – WHAT CAN WE DO?

- 

Coordination of main road
- 

Extension of the green signal for the side inlet
- 

Change signaling program for street renovation

Modified group

PROJECT PURPOSE:

Travel time reduction

Tests were performed during workdays which did not collaborate with non-working days

There were 3 time periods: Morning rush (6:30 – 8:30), Middle peak period (10:30 – 12:30), Afternoon period (14:30 – 16:30)

Each time period included 5 tram and 5 bus rides
